MetFi Promise

Earn up to 1000% fixed and compounding interest per year buying MetFi NFTs!

This introduction to MetFi explains how this promise is possible and how you can participate.

Vision

MetFi aspires to be the world's #1 metaverse and Web3 incubator, executing strategic early-stage investments in the next wave of metaverse and Web3 unicorns and giving individuals like you a personal, early stake in these projects before the general public.

Mission

Identify > Invest > Incubate

Identify, invest in, and incubate promising early-stage metaverse and Web3 projects, helping them to become unicorns and sharing the financial returns with all MetFi NFT owners.

New Frontiers

MetFi is the world's first DeFi 2.0 collectible NFT ecosystem focused on incubating metaverse and Web3 unicorns. A unicorn is a business or project valued at \$1 billion or more.

NFT Landscape Today

There are essentially 2 types of NFTs today...

- 1. Collectible NFT** - subjective and speculative digital art that has the potential to increase in value if demand is higher than supply.
- 2. Utility NFT** - additional perks that add value to a collectible NFT such as community membership and staking rewards.

MetFi NFTs are collectible NFTs with built-in utility from day one - the best of both worlds!

MetFi Tokens

When you purchase a MetFi NFT you own a collectible but you also receive complimentary MFI tokens that are staked to the NFT. New MFI tokens will be staked to your NFT every day, increasing the total number of MFI tokens that you own exponentially thanks to the power of compound interest.

You can unstake your MFI tokens at any time and do with them as you please. MFI tokens can be traded on the open market.

APY

Annual Percentage Yield (APY) is the real rate of return on an asset after compounding interest has been factored in. Each MetFi NFT comes with a fixed rate APY that will never change.

The more NFTs that you own the higher the APY you receive, up to 1000% per year. MetFi is for anyone that wants to generate passive, fixed, compounding interest.

Buying MetFi NFTs

Everyone begins their MetFi journey by purchasing one or more MetFi NFTs. There are a total of 10 NFTs in the MetFi collection, you can buy as many or as few as you like.

NFT #1 costs \$100, NFT #2 costs \$200, and so on - the price doubles with each NFT in the collection, as do the number of MFI that you receive. 10% of each NFT's purchase price is gifted to you in complimentary MFI tokens that are automatically staked to your NFT. The APY increases by 100% with each NFT.

You need to buy the preceding NFT before you can buy the next NFT but you can purchase as many NFTs as you like in one transaction, and you can upgrade your NFT collection at any time.

Tokens gifted to you with each NFT purchase are merged together, increasing the cumulative number of staked MFI. All of your staked MFI are automatically staked to your highest NFT, ensuring that you always receive the highest possible APY.

MetFi NFT Collection

NFT Collection	Price	Staked MFI Per NFT	Total Staked MFI	APY
Shrimp	\$100	\$10	\$10	100 %
Crab	\$200	\$20	\$30	200 %
Octopus	\$400	\$40	\$70	300 %
Fish	\$800	\$80	\$150	400 %
Dolphin	\$1,600	\$160	\$310	500 %
Shark	\$3,200	\$320	\$630	600 %
Orca	\$6,400	\$640	\$1,270	700 %
Whale	\$12,800	\$1,280	\$2,550	800 %
Whale Shark	\$25,600	\$2,560	\$5,110	900 %
Humpback	\$51,200	\$5,120	\$10,230	1000 %

The smartest wealth accumulation strategy is to own a maximum of 10 NFTs and purchase additional tokens via the MetFi dashboard that you stake to your highest NFT.

The table below illustrates what happens when you follow this powerful strategy and spend the same amount of money that you spent purchasing all of your NFTs on buying additional MFI, staking them, and allowing the fixed APY to passively compound your funds for 1 and 2 years.

NFT Collection	Staked MFI	Additional MFI Purchased	Total Staked MFI	Total Funds Spent	APY	1st Year Balance	2nd Year Balance
Shrimp	\$10	\$100	\$110	\$200	100 %	\$220	\$440
Crab	\$30	\$300	\$330	\$600	200 %	\$990	\$2,970
Octopus	\$70	\$700	\$770	\$1,400	300 %	\$3,080	\$12,320
Fish	\$150	\$1,500	\$1,650	\$3,000	400 %	\$8,250	\$41,250
Dolphin	\$310	\$3,100	\$3,410	\$6,200	500%	\$20,460	\$122,760
Shark	\$630	\$6,300	\$6,930	\$12,600	600 %	\$48,510	\$339,570
Orca	\$1,270	\$12,700	\$13,970	\$25,400	700 %	\$111,760	\$894,080
Whale	\$2,550	\$25,500	\$28,050	\$51,000	800 %	\$252,450	\$2,272,050
Whale Shark	\$5,110	\$51,100	\$56,210	\$102,200	900 %	\$562,100	\$5,621,000
Humpback	\$10,230	\$102,300	\$112,530	\$204,600	1000 %	\$1,237,830	\$13,616,130

MetFi Treasury

The treasury is the beating heart of the MetFi ecosystem. Profits from all NFT sales are automatically sent to the treasury. The treasury invests some of these funds into early-stage metaverse and Web3 projects with the aim of investing in, and incubating unicorns.

Funds are also invested into more established metaverse and Web3 projects with compelling roadmaps, outstanding teams, and large, engaged communities with a strong likelihood of long-term success.

Profits from the treasury generate new tokens which are shared among all NFT holders according to their NFT / APY level (100% to 1000%) as illustrated in the MetFi NFT Collection diagram above.

The treasury is owned by the community, not by a company or individual, more on this below.

How the Treasury Pays High APY

Before explaining MetFi APY in more detail it's important to understand the sheer size of the metaverse opportunity.

JP Morgan predicts metaverse yearly revenues will hit \$1 trillion in the coming years and they are the first bank in the world to open a virtual bank inside the metaverse, they certainly won't be the last. Facebook changed their name to Meta and are making huge investments in the metaverse. Billions of dollars are being invested into metaverse projects today.

MetFi is regularly approached by metaverse and Web3 startups seeking investment and incubation. Buying a MetFi NFT gives you a stake in all MetFi treasury investments that very few people get early access to.

Identifying, investing in, and incubating the very best, metaverse and Web3 startup projects that have the strongest likelihood of becoming metaverse unicorns is what MetFi does best.

MetFi's business model allows it to pay high and fixed APY's for several reasons, including;

1. All profits from NFT and token sales are sent to the treasury for investment in metaverse and Web 3 projects.
2. MetFi NFT owners stake their tokens to their NFTs because doing so generates more tokens each day (APY) and these tokens compound, growing daily, incentivizing owners to hold on to their staked tokens to keep receiving an increasingly higher number of new tokens via APY.
3. The treasury invests in private metaverse and Web3 sales long before the public knows about them, at a much lower entry price. Investing early and selling later can generate staggering returns.

For example, there are multiple metaverse projects that have generated returns of 1000x or more. If MetFi invests in just one project with these returns the treasury can provide a sustainable APY of 1000% for over 10 years. All profits go directly back to the treasury.

4. The majority of people are not going to purchase NFT #10 on day one, most people will upgrade their NFTs over time, meaning not everyone will receive 1000% APY.

Irrespective, MetFi can pay a fixed APY of 1000% to 100% of NFT owners if every owner held NFT #10. The MetFi protocol was created and programmed by mathematical geniuses and has been designed and built to last for decades.

5. The treasury receives a royalty every time a MetFi NFT owner sells their NFT.
6. The treasury receives daily profits from the MetFi affiliate program. If community members' unstake their tokens they are no longer eligible to receive commissions. This feature of the affiliate program incentivizes community members' to hold on to their tokens rather than sell them, lowering supply on the open market and increasing demand.

As you can see MetFi has multiple profit centers feeding the treasury. The treasury invests these funds into the most promising metaverse and Web3 projects. Profits from the treasury are then shared among MetFi NFT holders in the form of APY.

Furthermore, MetFi has incorporated a field of mathematics known as 'game theory' into its model. Game theory states that every person will act in their own best interests. With this in mind the MetFi ecosystem is synergistic, working holistically in the best interests of all participants, creating an orderly, logical, consistent, and complementary relationship between all parts of the ecosystem, aligning the combined efforts and desired outcomes of individuals with those of the community for short, medium and long-term success and sustainability.

Metaverses and Web3 are the next big technology wave and they will soon play a significant role in the lives of billions of people all over the world. Fortunately for you, MetFi is very early in these spaces with a unique offering that has never been seen before. Metaverse and Web3 is the evolution of the two biggest trends of the last 25 years - the internet and digital currencies on the blockchain.

History shows us that the value of strong technology companies (Google, Apple, Microsoft) and strong crypto projects (Bitcoin, Ethereum, Binance) increase in value over time, even if there are market corrections from time to time.

The market will have cycles however MetFi NFTs have a stronger chance of increasing in value because of the in-built token staking utility and high, fixed APY's. For all of the reasons listed above, not everyone is going to sell their MetFi NFTs at the same time limiting supply and increasing demand.

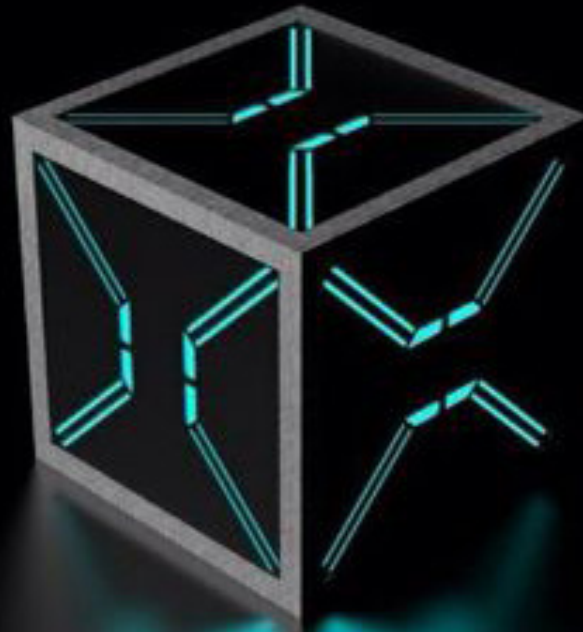

DAO

MetFi is a Decentralized Autonomous Organization (DAO) whereby the community owns and controls MetFi by voting on important decisions.

Meaning you, the community controls MetFi's direction.

MetFi operates via smart contracts living on the blockchain that have been permanently locked. This allows anyone to audit MetFi's open-source code whilst making it impossible for anyone to change it, even the developers.

The smart contract operates autonomously which means it is self-executing, running independently, without any human intervention, performing only the tasks that it was programmed to perform.

Ensuring that you will always receive what MetFi has promised with all transactions being processed in real-time and visible on the blockchain public ledger. It cannot be changed - the developers have locked the smart contract and destroyed the keys which makes it tamper-proof, permanently sealed, and 100% secure.

MetFi DAO also guarantees your anonymity. MetFi never collects your data!

Bitcoin is a DAO.
